Summary | Senior backend-leaning full-stack engineer with 7+ years shipping production APIs and the systems around them: NestJS and Node.js in TypeScript, PostgreSQL and Redis underneath, Python (FastAPI, Django) alongside. Strong record making third-party integrations dependable: rate limits, retries, idempotency, two-phase sync, failure that stays visible. Owns everything from schema design to deployment. Open to full-time and contract engagements.

Skills

Backend: NestJS, Node.js, TypeScript, Express, GraphQL, REST
Python: FastAPI, Django, Arq workers, pytest
Data: PostgreSQL, pgvector, Redis, MongoDB, schema design
Integrations: webhooks, OAuth 2.0/JWT, retry/backoff,

idempotency, rate-limit handling
Infra: Docker, Linux, Ansible, Coolify, GitLab/Jenkins CI/CD
Frontend (working): React, Next.js, TanStack Query
Languages: English (fluent), German (A1)

Selected Projects

Loam: startup-discovery pipeline

2026 – present

Personal research system running scheduled 24/7. FastAPI API, Arq workers on Redis, PostgreSQL with pgvector, Alembic migrations, Docker. Ingests problem-signal posts from Reddit, Hacker News, and GitHub Issues; embeds and clusters them; scores clusters with an explainable formula; summarizes with Claude; delivers a weekly digest with an idempotent Notion export. Currently adding an eval harness for the LLM summaries.

Experience

Barriertek (woodyportal.com)

Mar 2025 – Present

Senior Full-Stack Developer

Remote (Toronto, Canada)

Manufacturer modernizing operations through a custom customer and production portal.

- Sole engineer: designed the PostgreSQL schema and built the NestJS API powering order management, production scheduling, and logistics for distributors, truckers, production workers, and the office team.
- Built bi-directional sync with the company's ERP via REST APIs and webhooks; the first design hit rate limits and half-synced orders, so I rebuilt it two-phase (queue locally, reconcile via webhooks) with idempotency and visible failure states.
- Replaced phone-based order coordination, whiteboard production scheduling, and per-team Excel sheets with a unified real-time dashboard (React + TanStack Query).
- Owned deployment infrastructure: Coolify, Linux, Ansible; CI/CD with Docker and GitLab.

Dextrading

Dec 2022 – Apr 2025

Senior Full-Stack Developer

Remote (Toronto, Canada)

Cryptocurrency trading and analytics platform serving retail and professional traders.

- Designed and shipped a NestJS + GraphQL + PostgreSQL content platform that became a primary acquisition channel.
- Built and ran a Django-backed AI Q&A API in production, tied to subscription growth.
- Lead engineer on a 3-developer frontend team; rebuilt the customer-facing app on Next.js + TanStack Query.
- Established CI/CD via Docker, GitLab, and Jenkins; tightened deployment cadence and reduced rollout incidents.

Azer Tech (Sahibkar)

Jul 2021 – Jan 2023

Full-Stack Developer

Remote (Sumqayit, Azerbaijan)

Educational technology platform with a multi-language user base.

- Consulted on backend performance optimization, reducing API latencies on hot paths.
- Configured CI/CD pipelines with Portainer, Docker, and GitLab; built the multi-language Next.js frontend.

Chargoan

Feb 2020 – Aug 2021

Full-Stack Developer

Remote (Tehran, Iran)

Enterprise software vendor delivering business solutions to mid-market and enterprise customers.

- Enhanced backend logic in .NET, delivering measurable throughput improvements on transaction-heavy modules.
- Migrated legacy modules to a React + .NET stack as part of a 15-engineer team.

Hamisheh

Aug 2018 – Feb 2020

Frontend Developer

Tehran, Iran

PWA-based fitness video streaming startup (now defunct).

- Built the Angular front-end with HLS streaming, including PWA install and offline capabilities.
- Dockerized the frontend deployment, cutting daily deployment time substantially.
