Summary | Senior full-stack engineer (7+ years, TypeScript and Python) who ships LLM-backed systems end to end and makes unreliable systems dependable: rate limits, retries, idempotency, two-phase sync, failure that stays visible. Builds and runs Loam, a personal LLM research pipeline: ingestion, embeddings, clustering, explainable scoring, Claude summarization, scheduled delivery. AI-native workflow: coding agents daily, nothing ships unreviewed. Open to full-time and contract engagements.

Skills

LLM applications: Claude API, embeddings + pgvector, clustering (UMAP/HDBSCAN), structured outputs, explainable scoring
Python: FastAPI, Django, Arq workers, Alembic, pytest
TypeScript: NestJS, Node.js, React, Next.js, TanStack Query

Data: PostgreSQL, pgvector, Redis, MongoDB
Reliability: retry/backoff, idempotency, webhooks, rate-limit handling, partial-failure recovery
Infra: Docker, Linux, Ansible, Coolify, GitLab CI/CD
Languages: English (fluent), German (A1)

Selected Projects

Loam: startup-discovery pipeline **2026 – present**
Personal research system running scheduled 24/7: ingests problem-signal posts from Reddit, Hacker News, and GitHub Issues; filters, embeds, and clusters them (pgvector, UMAP/HDBSCAN); scores clusters with an explainable formula; summarizes with Claude; delivers a weekly email/Telegram digest with idempotent one-click Notion export. FastAPI, Arq workers, React 19, PostgreSQL, Docker. Currently adding an eval harness for the LLM summaries.

Experience

Barriertek (woodyportal.com) **Mar 2025 – Present**
Senior Full-Stack Developer *Remote (Toronto, Canada)*
Manufacturer modernizing operations through a custom customer and production portal.

- Sole engineer: designed and shipped an end-to-end TypeScript platform (NestJS API, React + TanStack Query frontend, PostgreSQL) used daily by non-technical staff: distributors, truckers, production workers, and the office team.
- Built bi-directional sync with the company's ERP via REST APIs and webhooks; my first design hit rate limits and half-synced orders, so I rebuilt it two-phase (queue locally, reconcile via webhooks) with idempotency and visible failure states.
- Replaced phone-based order coordination, whiteboard production scheduling, and per-team Excel sheets with a unified real-time dashboard.
- Owned deployment infrastructure: Coolify, Linux, Ansible; CI/CD with Docker and GitLab.

Dextrading **Dec 2022 – Apr 2025**
Senior Full-Stack Developer *Remote (Toronto, Canada)*
Cryptocurrency trading and analytics platform serving retail and professional traders.

- Built and ran a Django-backed AI Q&A API in production, tied to subscription growth: the model integration, persistence, and the product surface on top.
- Lead engineer on a 3-developer frontend team. Rebuilt the customer-facing app on Next.js + TanStack Query with substantial perceived-load improvements.
- Designed and shipped a NestJS + GraphQL + PostgreSQL content platform that became a primary acquisition channel.
- Integrated TradingView, Chart.js, and D3 for real-time market visualization with advanced filterable, cached data tables.

Azer Tech (Sahibkar) **Jul 2021 – Jan 2023**
Full-Stack Developer *Remote (Sumqayit, Azerbaijan)*
Educational technology platform with a multi-language user base.

- Built the multi-language Next.js frontend with server-side rendering for performance and SEO.
- Configured CI/CD pipelines with Portainer, Docker, and GitLab.

Chargoos **Feb 2020 – Aug 2021**
Full-Stack Developer *Remote (Tehran, Iran)*
Enterprise software vendor delivering business solutions to mid-market and enterprise customers.

- Migrated legacy modules to a React + .NET stack as part of a 15-engineer team, while shipping new features driven by customer requests.
- Enhanced backend logic in .NET, delivering measurable throughput improvements on transaction-heavy modules.

Hamisheh **Aug 2018 – Feb 2020**
Frontend Developer *Tehran, Iran*
PWA-based fitness video streaming startup (now defunct).

- Built the Angular front-end with HLS streaming, including PWA install and offline capabilities.
- Dockerized the frontend deployment, cutting daily deployment time substantially.
